DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-20 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The amended specification and the existing specification does not enable one skilled in the art to make and/or use the invention of an ultra wide band network using a TDMA frame format. How does ultra wide band network enable TDMA? In other words, the specification does not describe in such a way to enable how the ultra wide band network implements the TDMA.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 1, 9, 14, and 20 rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Regarding claims 1, 9 and 20, Under the Interim Guideline for Examination of Patent Applications for Patent Subject Matter Eligibility, the claims seek for patent protection of a

Art Unit: 2664

signal. Moreover, it does not appear that claims reciting a multiplicity of ultra wide band signal encoded with functional descriptive material falls within any of the categories of patentable subject matter set forth in § 101.

Regarding claim 14, Under the Interim Guideline for Examination of Patent Applications for Patent Subject Matter Eligibility, the claims seek for patent protection of a signal. Moreover, it does not appear that claims reciting a multiplicity of ultra wide band signal encoded with functional descriptive material falls within any of the categories of patentable subject matter set forth in § 101. In addition, according to ANNEX IV-Computer Readable Nonstatutory Subject Matter section of the Interim Guideline for Examination of Patent Applications for Patent Subject Matter Eligibility, the computer program is not embodied or encoded on a computer read-able medium.

Response to Arguments

5. The amendment to the specification filed on 2/2/06 to include one paragraph of the '683 patent, which is incorporated by reference is accepted for consideration.
